

## HP Security Field Update: Endpoint Release Notes

September 2023

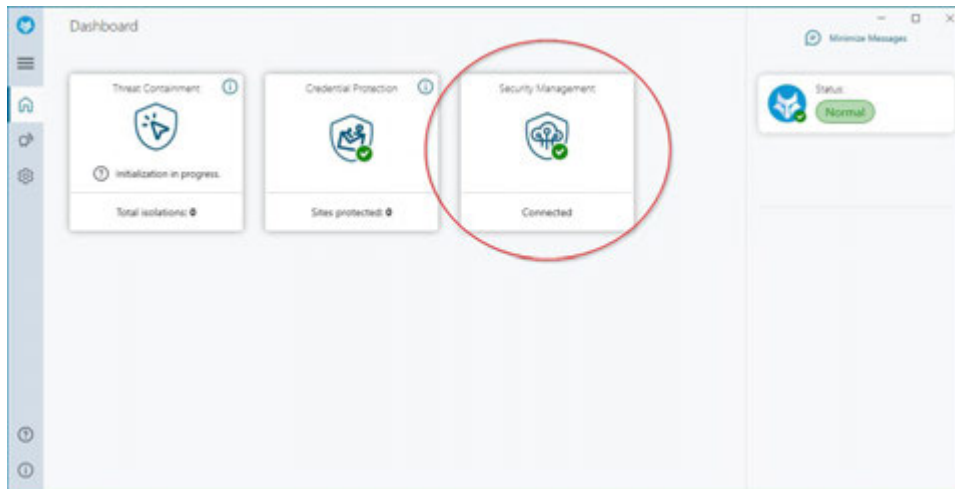

Scope: This document includes updates and bug fixes for Wolf Pro Security/Edition.

**Availability:** October 2<sup>nd</sup>, 2023

**Version:** 4.4.7.365

### Notable Bug Fixes

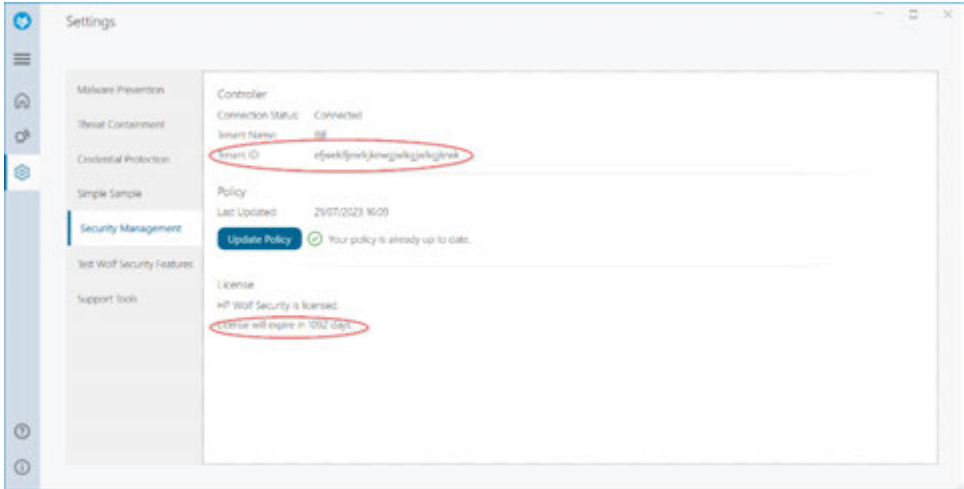

- [WPS] – Fixes an issue where a BSOD would occur on HP Workstations with more than 1 TB of RAM.
- [WPS] – Fixes an issue where the Security Management tile on the desktop console was not shown in some cases when a tenant managed the device.

- [WPS] - Fixes an issue where a file could lose Sure Click protection when dragged and dropped out of an email attachment in Outlook.

**User Experience Improvements**

- [WPS] – The Wolf Pro Security license expiry period and Tenant ID is now shown on the desktop console if the endpoint is managed. Unmanaged WPSE devices will not see the details below.  
Showing the expiry date for unmanaged WPSE devices will be available in a future build.

- [WPS] – If the desktop console is open when the product is being upgraded in the background, it will not show a notification message; instead, it closes without user input or warning.
